Scope

On behalf of the above mentioned Air Liquide Central Europe entities, Vinçotte performed a claim validation for gaseous products labelled "Gas produced with renewable electricity"¹ sold by Air Liquide Central Europe entities in 2025. The validation was performed by Vinçotte in accordance with the methodology and procedures set out in the Claim Protocol Validation report² and the Verification Protocol Report³. The Claim Protocol and the Verification Protocol were developed according to the ISO 14020:2022 "Environmental statements and programmes for products – Principles and general requirements" and ISO 14021:2016 "Environmental labels and declarations – Self declared environmental claims (Type II environmental labelling).

The type of products concerned by the Claim are: oxygen, nitrogen, argon and all their mixtures(all qualities). To produce the quantities of aforementioned products, sold to the customers, Air Liquide Central Europe entities are committed to:

- Use renewable electricity generated in Europe, Poland and Turkey for the production of aforementioned products under their liquid form, and temporary storage on the production site of these quantities (ECO ORIGIN);
- Use renewable electricity generated in Europe, Poland and Turkey for the electricity consumption at the filling sites of Air Liquide Central Europe entities for the filling of the cylinders and bundles.

Declaration of independence

The validation was carried out by Vinçotte as an independent third party.

Conclusion

Based on the work undertaken, it is the conclusion of Vinçotte that all direct electricity consumption associated with the production of the aforementioned products is fully covered through the procurement of an equivalent quantity of renewable electricity generated in Europe, Poland and Turkey.
